poll.js

```
window.Poll = Backbone.View.extend({
  initialize: function() {
    this.$el.append("<embed src=\"img/HTML5_Badge.png\">");
    this.views = $('

</div>');
    this.choices = new ChoicesView();
    this.results = new ResultsView();
    this.views.append(this.choices.$el);
    this.views.append(this.results.$el);
    Choices.each(function(choice) {
      return new ChoiceView({
        model: choice
      }).render();
    });
    return this.results.renderVotes();
  },
  events: {
    'submit form': 'submitVote'
  },
  submitVote: function(e) {
    var email, newvote;
    email = $('input[name="email"]').val();
    console.log(Choices.getSelected());
    if (!email) {
      return;
    }
  }
});

          <h4>Semantics</h4>
        <!-- Ugly guts continue -->
```

HTML

This is
INSANE

The image shows a roller coaster under construction or renovation. A large white banner with the words "This is INSANE" in red and black letters is prominently displayed across the middle of the frame. In the background, a building with a glass facade is visible. The foreground features several colorful wooden fence posts.

Web Components make it real
[**Let me show you**](#)

Component **Users**

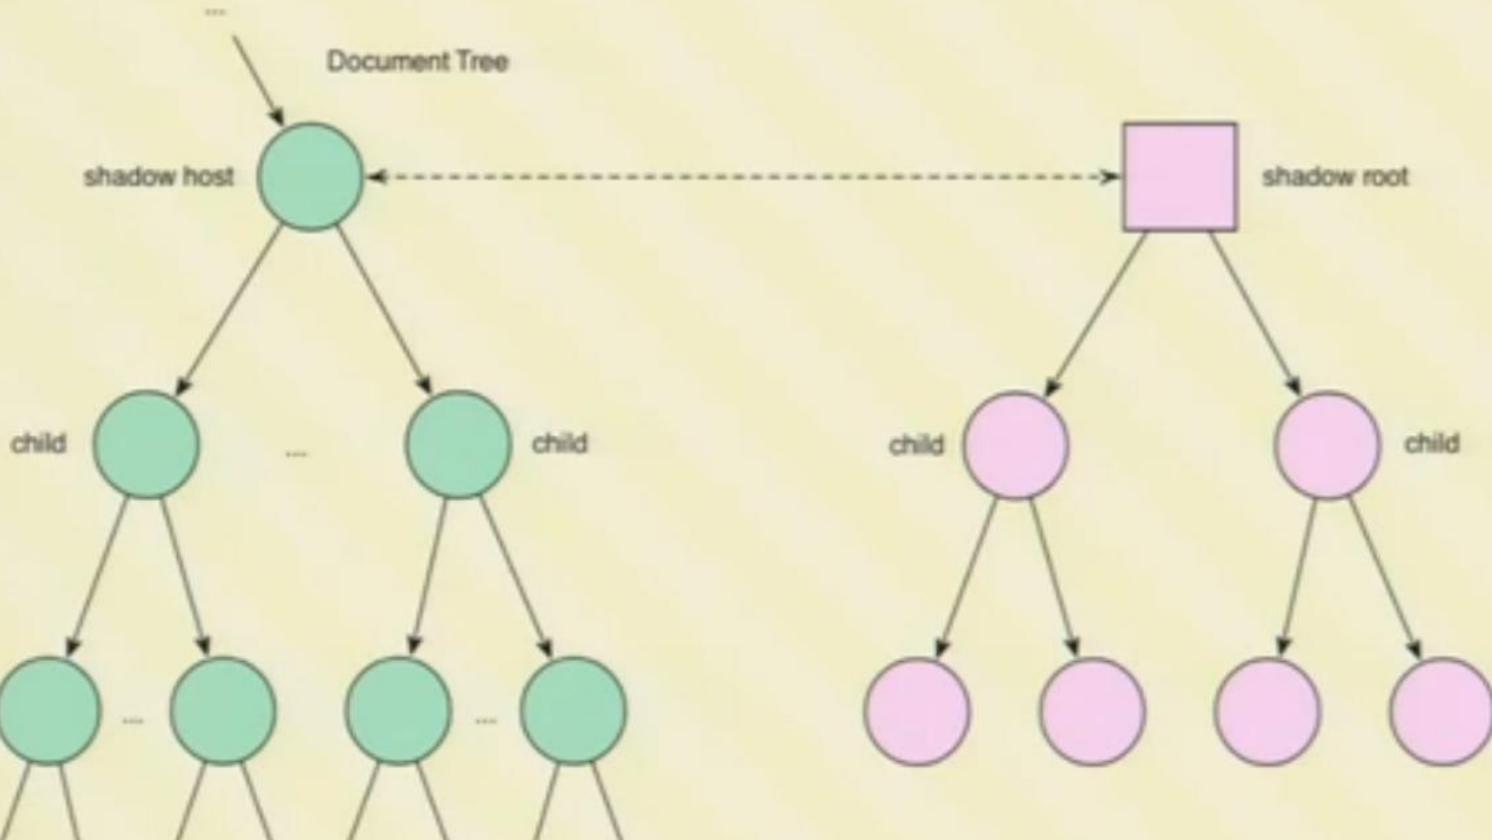

Simple and Declarative

Component **Authors**

More power, more responsibility

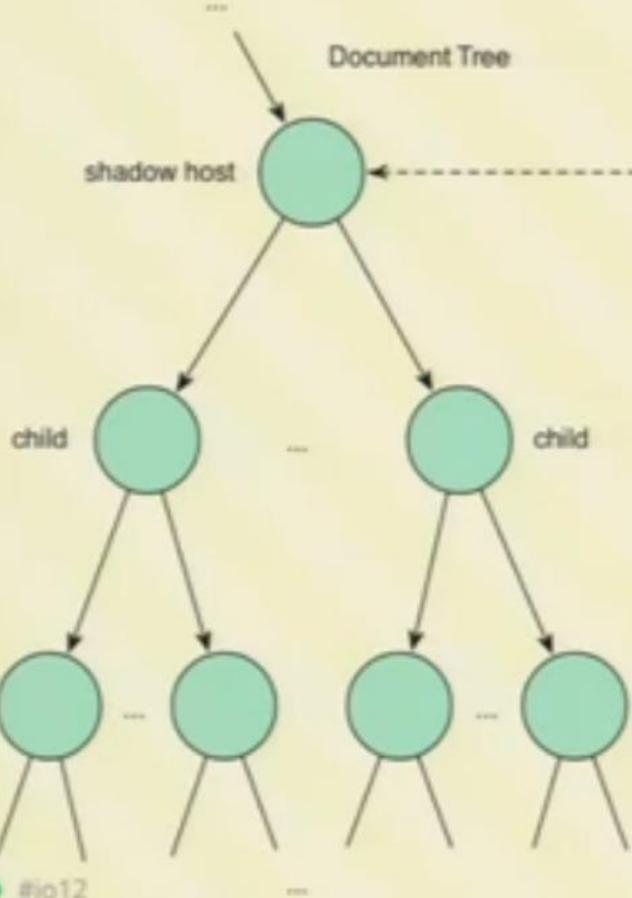

Behind the scenes

DOM Nodes can have Shadow DOM

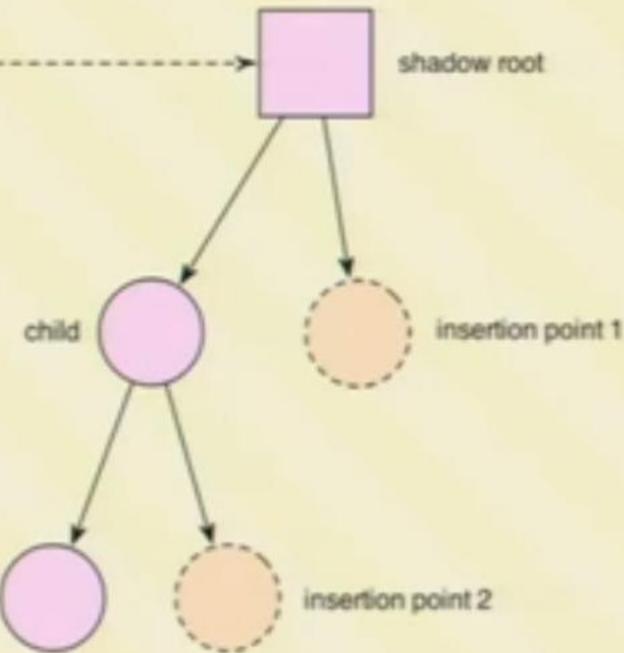

Behind the scenes

Insertion points are holes in Shadow DOM

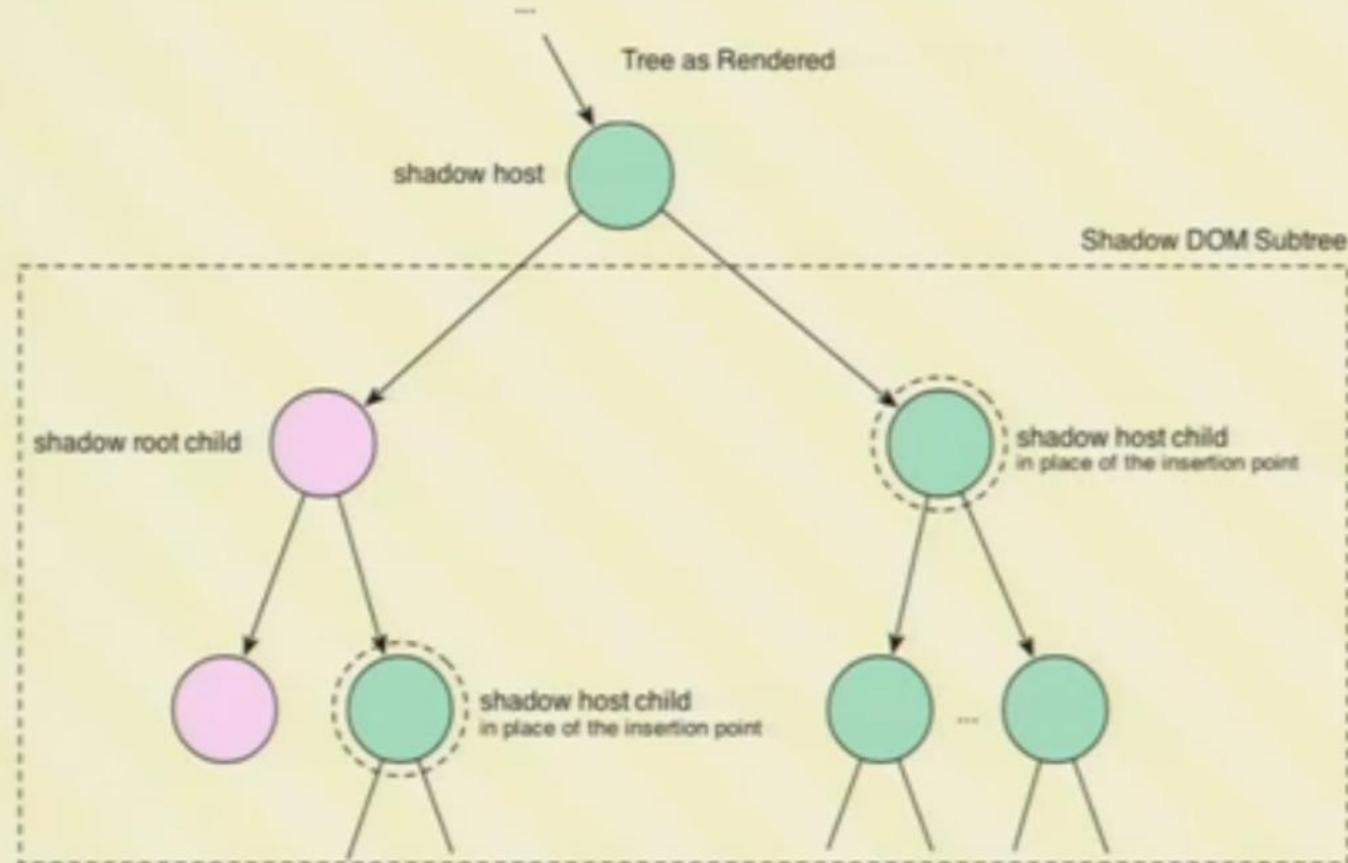

Shadow DOM Subtrees

Behind the scenes

Light content punches through insertion points

Behind the scenes

Implementing <x-choice>

HTML

```
<x-choice>
<div id="choice">
  <div id="icon" class="mask"></div>
  <content select="h3:first-of-type"></content>
  <aside>
    <content select="*>"></content>
  </aside>
</div>
</x-choice>
```

Behind the scenes

Custom Elements: Packaging for Reuse

Define it

```
<element name="x-choice" extends="div" constructor="ChoiceControl">
  <template>
    <div id="choice"><content select="img:first-of-type"><!-- ... -->
  </template>
  <script>
    ChoiceControl.prototype.wasSelected = function() { /* ... */ }
  </script>
</element>
```

HTML

Use it

```
<link rel="components" href="components/choice.html">
<!-- ... -->
<x-poll></x-poll>
```

HTML

```
document.querySelector('x-poll').wasSelected();
```

JAVASCRIPT

Behind the scenes

Implicitly scoped styles limit style influence

HTML

```
<template>
  <!-- surrounding styles don't leak in by default -->
  <style>
    /* These styles only affect inside the template */
    *
    color: red;
  }
</style>

<p>This text will be red...</p>

</template>

<p>...but content in the rest of the document won't be</p>
```

Our designer wants a tabstrip, not an accordion

No sweat, swapping components is easy

HTML

```
<link rel="components" href="components/tabs.html">
```

HTML

```
<!-- ... -->
</hgroup>
</section>
<x-tabs>
  <h2>Poll</h2>
  <section>
    <div id="choices">
      <content select="x-choice"></content>
    </div>
  <!-- ... -->
```

```
poll.html      x  embedded-poll-example.html  x  screen.css  x
136          <content select="nz-first-of-type">Subtitle</content>
137      </hgroup>
138  </section>
139  <x-accordion>
140    <h2>Vote</h2>
141    <section id="poll">
142      <div id="choices">
143        <content select="x-choice"></content>
144      </div>
145      <div id="voting">
146        <input placeholder="Email (optional)" name="email">
147        <button><content select="span.label-title:first-of-type">Place my vote
148      </div>
149    </section>
150    <h2>Results</h2>
151    <section>
152      Results go here.
153    </section>
154  </x-accordion>
155 </template>
156 <script>
```

Using x-poll on other sites

Changing what's exposed in the DOM

HTML

```
...  
<link rel="components" href="http://awesomepolls.com/components/awesome-poll.html">  
...
```

HTML

```
<x-awesome-poll href="http://pollsite.com/poll/324">  
  <!-- Don't expose any of the internals so embedders can't muck with them -->  
</x-awesome-poll>
```

New poll!!!!!! 6/27/12

OMG Kittens!!!! 6/23/12

```
poll.html          embedded-poll-example.html --- parkour-io-2012
34      </ul>
35  </div>
36  <div class='content'>
37      <section>
38          <h1>New poll!!!! <span>6/27/12</span></h1>
39          <x-awesome-poll href="http://awesomepolls.org/html5">
40  <!-- Un-comment to demo poll markup API
41          &lt;aside&gt;Vote for CSS3, cuz its teh awesome!!&lt;/aside&gt;
42          &lt;label&gt;VOTE NAO!!1!&lt;/label&gt;
43  --&gt;
44      &lt;/x-awesome-poll&gt;
45  &lt;/section&gt;
46  &lt;section&gt;
47      &lt;h1&gt;OMG Kittens!!!! &lt;span&gt;6/23/12&lt;/span&gt;&lt;/h1&gt;
48      &lt;p&gt;As most of you already know, kittens are my &lt;strong&gt;absolute fave&lt;/strong&gt;.
        excitement when my new neighbors moved in, and it turns out that have THE. CUTE
        strong&gt;
49  &lt;/section&gt;
50  &lt;/div&gt;
51 &lt;/div&gt;
52 &lt;/body&gt;
53 &lt;/html&gt;</pre>
```

Using x-poll on other sites

Markup as API

```
<x-awesome-poll href="http://pollsite.com/poll/324">  
  <aside>Your custom question subtitle</aside>  
  <label>Your custom "submit my vote" text</label>  
</x-awesome-poll>
```

HTML

Quick aside CSS Variables

CSS

```
:root {  
    var-my-color : green;  
    var-my-border: 1px solid var(my-color);  
}  
  
h2, h3 {  
    border: var(my-border);  
}
```

Using x-poll on other sites

Styling via CSS Variables

Component **author** uses variables to expose style hook points

```
* {  
    font: var(poll-font);  
}
```

CSS

```
h2 {  
    color: var(poll-title-color);  
}
```

Component **user** applies styles to the element

```
x-awesome-poll {  
    var-poll-font: "Comic Sans MS", "Comic Sans", cursive;  
    var-poll-title-color: #FF86FF;  
}
```

CSS

```
poll.html      x embedded-poll-example.html x screen.css * screen.css — parkour-io-2012

34
35
36     .sidebar h2 {
37         text-decoration: underline;
38     }
39
40     .content section h1 {
41         color:blue;
42     }
43
44     .content section h1 span {
45         color:yellow;
46     }
47
48
49
50     x-awesome-poll {
51         -webkit-var-poll-font: "Comic Sans MS", "Comic Sans", cursive;
52         -webkit-var-poll-title-color: #FF86FF;
53     }
54
```

There's a great big beautiful tomorrow

The Declarative Renaissance

- Guardrails, not etiquette
- Interoperable widget libraries
- Multiple authors on a page without stepping on one another's toes
- Many use cases fully declarative
- Declarative goes faster
- Rise in shared semantics

The future's not as far away as you might think

- Shadow DOM, CSS variables shipping in Chrome soon
- Effective polyfills are coming soon
- Other browser vendors are excited

Help the future arrive faster

- Follow
 - [Web Components + Page \(goo.gl/K8UEj\)](#)
- Learn
 - Introduction to Web Components
 - CSS Variables Spec
- Discuss
 - Public Webapps Standardization Mailing List
 - CSS Standardization Mailing List
- Experiment
 - Web Components Polyfill (requires Shadow DOM support)
 - Mozilla's x-tags Custom Elements Polyfill (works on all browsers)

<Thank You!>
